About and Dashboard Page

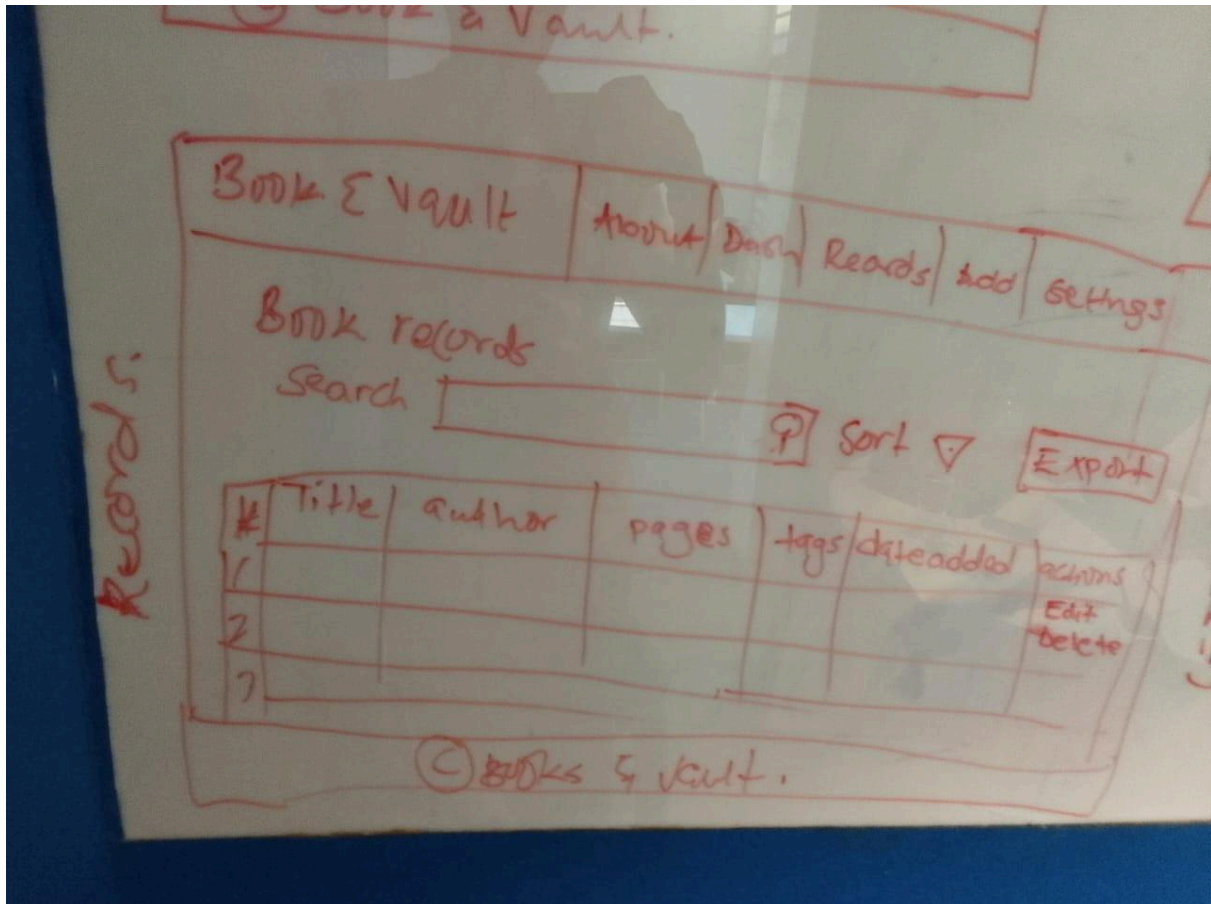

The About and Dashboard will be unified into a single page (index.html). This will consist of a brief description of the platform, GitHub and email links, and dashboard metrics for total books, authors and recently added top 5 books.

Records page

This page will enable users to view all books registered in the localStorage and also allow them to search by author or title using a fuzzy search mechanism.

The user will also be able to sort and export the records returned from the localStorage.

Add Book page

This page will enable the user to add either a single record by filling the form or by choosing "import" to add multiple records at once.

The image shows a hand-drawn wireframe of a web page titled "Add Book". The page is part of a system called "Books & Vault". At the top, there is a navigation bar with links: "About", "Dash", "Records", "Add", and "Settings". The main heading is "Add a Book". To the right of this heading is a button labeled "Import 1.37". Below the heading, there are four input fields: "Title", "Author", "Tags", and "Pages". To the left of these fields, the word "Add" is written vertically. To the right of the "Pages" field, there is a small circular icon with a face. At the bottom right, there is a button labeled "Add". At the bottom left, there is a copyright notice: "© Books & Vault".

Pages

Add

© Books & Vault.

Settings page

The settings page will enable the user to set the maximum size of the import file to ensure we do not break the application. 10MB will be the default size for the json file.
